PROFESSIONAL SUMMARY

Computer Programming and Information Systems graduate (Magna Cum Laude, May 2026) and Full Stack Lead on a 5-person Agile team that shipped a production web app with three Claude API features. Experienced in building with AI tools and validating their output, writing automated tests, and documenting systems clearly for technical and non-technical readers. Seeking an entry-level software engineering, AI development, or technical support role in the NYC area.

EDUCATION

Farmingdale State College, Farmingdale, NY **May 2026**
B.S. Computer Programming and Information Systems, Magna Cum Laude

Nassau Community College, Garden City, NY **December 2023**
A.S. Information Technology, Dean's List

SKILLS

Languages: JavaScript, Python, Java, PHP, SQL/MySQL, HTML/CSS
Engineering: REST APIs, Claude API, Firebase, Git/GitHub, Docker, Railway, Playwright, JavaFX, Microsoft Copilot
Practices: Agile/Scrum, SDLC, test plans, root-cause analysis, technical writing
Security fundamentals: password hashing, parameterized queries (SQL injection prevention), session handling

PROJECTS

SmartPlate – Nutrition Web App (Team Project) *PHP, MySQL, JavaScript, Claude API*
Live site: smartplateseniors-production.up.railway.app
- Served as Full Stack Lead on a 5-person Agile team, owning 4 of 6 feature modules across 6 sprints for a production PHP/MySQL web application deployed via Docker to Railway
- Designed the 11-table MySQL schema and built authentication, the dashboard, and the UI/UX; integrated MealDB and USDA APIs
- Built three AI features with the Claude API (chatbot, personalized meal plan generator, shopping list builder with PDF export) and a sanity-checking process to validate AI-generated results
- Diagnosed and resolved production issues including an SSL certificate trust chain failure, database connection errors, and API integration errors; documented root causes to prevent recurrence
- Authored the technical documentation and test plan (ERD, user stories, edge cases) for technical and non-technical teammates

SmartPlate Test Automation *Playwright, JavaScript*
github.com/kemi-lee/smartplate-tests
- Built a 20+ test end-to-end suite covering authentication, access control, registration, dashboard, shopping list, and an AI-driven meal plan flow; tested non-deterministic AI output by asserting structure and rules, not exact text
- Found and documented 2 defects, including a missing login redirect that exposed a protected page; traced it to output sent before the redirect, fixed it, and re-ran the suite to confirm

Stylz – Outfit Planner (Team Project) *Java, JavaFX, Firebase*
github.com/DeshanaeMorris/Outfit-Planner-Project
- Built the JavaFX screens and Firebase user authentication (signup, login, and password reset with emails sent after signup and during account recovery) on a team of four using Git across multiple branches
- Created unit tests, tested the application manually during development, and wrote the project documentation

WNBA Mini Data Jam (Girls Who Code, hosted by the WNBA with AWS) **October 2026**
Project site: nehasaji28.github.io/GravityFalls
- Won the fan route as part of a 4-person team that turned the Gravity stat into an animated story and web experience
- Wrote the story and the 5-minute pitch presented to judges, explaining off-ball Gravity in plain language

EXPERIENCE

Direct Support Professional, AHRC Nassau **March 2026 – Present**
- Support individuals with developmental disabilities with daily living, personal care, and community integration

Retail Associate, Tech Support & Membership Desk, BJ's Wholesale Club **July 2022 – March 2026**
- Served as a tech resource and customer support representative, helping customers navigate the BJ's app and set up accounts; explained technical issues in plain language to frustrated users
- Escalated a suspected duplicate charge that wasn't obvious in the transaction history, surfaced the real issue, and kept the member updated until it was resolved

Social Media Manager, Supporting Women in Computing (SWIC), Farmingdale State **Fall 2025 – Spring 2026**
- Diagnosed why past posts weren't driving turnout, then rebuilt the strategy with a design partner using social content, direct outreach to professors, and short-form video
